BootXP 2.50 Free Download

BootXP is a software solution that enables users to change the boot screens on both Windows XP and Windows 2000 without affecting the system's stability. Getting the app to run is quite easy. It greets you with a so-called "First Run Options Dialog", prompting you to provide the boot screen's default location and, in case multiple operating system are installed on the same machine, to choose the one you wish to tweak. The interface might seem a bit overwhelming at the first glance, but features are nicely organized in tabs, with preview windows to let you know what you're doing at all times. The main window shows you the boot screens found on your computer, but at the same time it lets you browse for more files. The preview screens offer you a glimpse into how the boot screen may look like, while also allowing you to export them as either BMP or EXE. The Options menu sports dedicated settings to input the path to boot screens, be they images, executable files or ZIP archives. Plus, you can reset the kernel file, restore the boot.ini backup, remove overlay bitmaps and change logo every time computer starts. Last but not least, BootXP also comprises a separate feature to download more boot screens from the Internet, searching various sites for new content that can be automatically downloaded and installed on your machine. Although everything should work like a charm, we still recommend you to make a backup before everything else, just to make sure you're on the safe side all the time. All in all, BootXP is quite a nice way to tweak your Windows operating system. Too bad it works only on XP and 2000. BootXP

2.50 Activation Code Full Versions: BootXP is a software solution that enables users to change the boot screens on both Windows XP and Windows 2000 without affecting the system's stability. Getting the app to run is quite easy.
